WORK EXPERIENCE

 **BOSCH** – BURSA, TÜRKİYE

MANUFACTURING DATA ANALYST – 01/08/2024 – CURRENT

Digitalisation Technologies Coordinator

Assembly & Testing Data Infrastructure for Root Cause Analysis

- Developed a data infrastructure for real-time analysis of common rail injector assembly and testing data, leveraging Azure DataBricks for big data processing.
- Applied Python and essential libraries (Pandas, NumPy, Seaborn) to automate data cleaning, grouping, and backward-tracing methodologies, reducing analysis time from hours to minutes.
- Implemented Red X methodology with "Green Y" targets, using statistical comparisons (BoB and WoW) to isolate potential process issues and improve field reliability.

Tableau & PowerBI Visualisation

- Developed a dynamic Tableau dashboard using Azure DataBricks and SQL Database, designed for real-time tracking of internal defects within GEMBA.
- Enabled rapid visualization of defect recurrence over the last 12 months, along with detailed breakdowns to assist in targeted problem-solving.
- Independently constructed the dataset to ensure accurate and relevant data for comprehensive analysis.
